<u>Best Stuff Warehouse Database Description</u>

This database tracks the inventory of a warehouse which acts as central distributor for a retail business called, Best Stuff. The database is for inventory management and information only. No financial data has been incorporated.

The main focus of the database is to:
- Track the quantity of each product stored in inventory
- Track the quantity of each product received from manufacturers
- Track the quantity of each product distributed to retail locations

The business operates within the state of Illinois with 6 retail locations in 5 cities. There are 9 products in total made by various manufacturers spread across the United States. The products are of a fictitious nature.

List of products:
- widget
- whatsis
- doohickey
- doodad
- gizmo
- whatchamacallit
- thingamajig
- thingamabob
- whatnot

The length for product ID's (VARCHAR2) and shipping IDs (NUMBER) have been shortened for convenience. Values for shipping IDs were chosen at random. It is assumed various third party shipping companies are used, so values may not follow any sequence or pattern. All other table attributes should follow normal expected values.
